PRESS RELEASE

★ PERMA•CRETE® RECEIVES NATIONWIDE ★ CODE APPROVAL!

February 23, 2006

* * * * * Nashville, Tennessee

"Quality Systems, Inc. (QSI) is pleased to announce the successful completion of all required Thermal and Moisture Protection code criteria for approval by the International Code Council (ICC) on commercial and residential vertical surface applications for its proprietary line of premium, high-strength PERMA•CRETE® surface coating products. PERMA•CRETE® also becomes the only cementitious coating approved under current criteria by the ICC as the exterior surface over Insulated Concrete Form (ICF) construction, the fastest growing residential and commercial building material in the US and Canada," said George A. Henderson, President and Chief Executive Officer of the sixteen year-old company which manufactures the products. The ICC is the ruling regulatory code organization adhered to throughout the U.S. and many parts of the world.

Although the PERMA•CRETE® product line, which is distributed worldwide by over 1,000 Dealers, includes epoxies, urethanes, sealers, caulks, cleaners, strippers and bonding additives, its exclusive cementitious surface products have gained considerable recognition in the past sixteen years as a premium concrete resurfacing material that's used in the homebuilding industry as well as for vehicular and pedestrian traffic areas, even including interstate highway bridges and airport runway surfaces.

PERMA•CRETE®'s acrylic polymer cement compound of over 6,000 PSI compressive strength is applied over concrete, masonry, aggregate, foam and steel, and provides an architectural surface of unusual strength and flexibility with twice the overall strength and endurance as that of standard concrete. It's extremely resistant to stains from oil, mildew, salt or water as well as to industrial chemicals, and equally withstands freeze-thaw cycles, intense heat and ultraviolet sunrays. Its sealed and non-porous surface, available in virtually any color or design, provides easy maintenance by using normal household detergents to hose it clean.

For the past sixteen years, Quality Systems, Inc. has been distributing PERMA•CRETE® products which are manufactured in the firm's state-of-the-art, three acre corporate complex in Nashville, Tennessee.
